Pre-Installation Specifications
Modbar EP

Instructions for plumber, electrician, architect or designer, outlining the specific requirements PRIOR TO INSTALLATION of the Modbar EP Espresso System.

Prepare your site for the installation of one or more tap(s) and a drip tray(s) in the countertop surface and one or more module(s) on a well-ventilated shelf or rack directly below.

Designer or Architect Specifications — Above Counter

- A dry, well-ventilated counter area, which is between 32" and 38" high, with a depth of at least 20".
- An area to be provided next to the machines for a grinder and working area. To maintain a clean look, we recommend considering grinder placement and location. Building a drop into the countertop between 4" and 8" can be effective.
- 1.5" and several smaller holes drilled through the countertop for each tap and appropriate holes cut for each drip tray. Cuts should be made prior to the installation using the Modbar EP layout template.
- If installing multiple taps, leave 12-14" between center holes on adjacent taps.

Designer or Architect Specifications — Below Counter

- Cabinet space should have a depth of at least 20” and a width of at least 26” to allow for clearance around and behind the modules.
- Shelves or a wire rack should be provided to support each module.
- Rear access to modules recommended whether through sliding doors or removable panels.

We do not recommend installing cabinet doors in this space.

Cafe owner should consider where filtration will go. Water filtration is required for all coffee equipment.

Water Specifications

Your filtration system should produce water with the following properties:

<table>
<thead>
<tr>
<th></th>
<th>T.D.S.</th>
<th>90—150ppm</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOTAL HARDNESS</td>
<td>70—100ppm</td>
<td></td>
</tr>
<tr>
<td>TOTAL IRON</td>
<td>0—0.02ppm</td>
<td></td>
</tr>
<tr>
<td>FREE CHLORINE</td>
<td>0—0.05ppm</td>
<td></td>
</tr>
<tr>
<td>TOTAL CHLORINE</td>
<td>0—0.1ppm</td>
<td></td>
</tr>
<tr>
<td>PH</td>
<td>6.5—8</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>ALKALINITY</th>
<th>40—80ppm</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHLORIDE</td>
<td>0—30ppm</td>

Required Module Clearance

75mm / 3” min. clearance both sides

150mm / 6” min. clearance above

150mm / 6” min. clearance behind

min 150mm / 6”

min 75mm / 3”
Plumber Specifications

- Each module requires a ¾” angle stop valve, with a flow rate of at least 1 gallon per minute.
- Pressure between 35 and 70 PSI. If pressure is too high i.e. >70psi, pressure regulator is required.
- Owner should communicate with equipment installer about water filtration requirements. Talk with your sales representative for more information.

Waste Outlet

- Drain connection is male ¾” barb connection. Required ¾” armored drain hose (4 feet) is included with your system.
- Open gravity drain of minimum 1.5” interior diameter within 4 feet of module(s).
- Drain must be located lower than the placement of the bottom-most module in your Modbar system. There should be no less than 1” per foot downward slope in drain line.

Electrician Specifications

- The electrical requirements are 208-240 Volt single-phase, 50-60hz supply with 20 amp per module. (Subpanels are useful in multiple-module installations.)
- All modules will be supplied with a NEMA 6-20P plug end on the power cord. Receptacle should be no further than 5 feet from the modules, with the electrician responsible for installation of NEMA 6-20R.

Easy access to these attachment points for installation and service is one reason we recommend including a removable panel in your bar design.
