

MODBAR TECHNICAL BULLETIN #28 Firmware update

Dear Modbar family member,

We would like to inform you that new firmware is now available for the steam module (pre-2019 version) and for the pour-over module.

All Pour-over modules next in production will have the "Firmware 3.1 – Pour-Over". This firmware fixes an issue with the minimum brew volume when using ounces as units. For this reason, updating is highly advisable for those who want to use ounces instead of milliliters.

The same firmware is available for download on the modbar support page <https://modbar.com/support/us/>.

The Steam module (pre-2019 version) can now be updated with the firmware "Firmware 3.1 – Steam". This new version addresses an issue with the ability to change temperature when the boiler refresh is enabled. Furthermore, for greater safety, the steam refresh timeout has changed from 10 min to 2 min.

The same firmware is available for download on the modbar support page <https://modbar.com/support/us/>.

Please do not hesitate to contact us if you have any questions.
