

MODBAR TECHNICAL BULLETIN
#32
BIM libraries available

Dear Modbar family member,

BIM (Building Information Modeling) libraries are now available for each Modbar system. We feel that the Modbar BIM libraries could be a great tool for you when approaching designers/architects/contractor and kitchen manufacturers.

BIM is a 3D modeling tool which is commonly used by those professional to quickly analyze different design options and to create visualizations that help stakeholders understand what the project will look like before it takes shape. The model is then used to generate the design documentation for construction.

The Modbar 3D models can now be added in any BIM project as a fully integrated detail of it.

The library is available for download at the bottom of the <https://modbar.com/support/international/> page, under RESOURCES FOR DESIGNERS.

Please do not hesitate to contact us if you have any questions.

Modbar Support Team.
