

MODBAR TECHNICAL BULLETIN
#33
steam module drain hose

Dear Modbar family member,

starting from s/n MB002463, all modbar steam modules include a new drain hose in addition to the usual one.

The new hose is high-temperature resistant and it's designed to be attached directly to the module's drain outlets, where we've found that the extreme heat can damage the normal hose.

It's pre-cut in two pieces, which can be joined using the supplied "Y" manifold to the other hose if an extension is needed.

The total length of the hoses that are provided with each module hasn't changed.

Please be aware that this new hose is stiffer and also extremely difficult to be cut on-site with normal cutters or wire-cutters, as it's made of thick EPDM and reinforced with a very strong steel wire.

Should you need a shorter drain hose or, for any reason, not be able to use the new type of hose, we suggest you to continue using the normal hose and to check its conditions often. We understand that the excessive stiffness and the difficulty of cutting the hose may make it unsuitable for some installations. We are working hard and are confident towards finding a more practical solution soon, to better suit all possible installation scenarios.

The new EPDM drain hose is also available as a spare part with code T.3.010 (length must be specified in the order).

Please do not hesitate to contact us if you have any questions.
